SUMMARY

Senior AI Engineer & 2x Founder who builds production-grade AI systems from 0→1 across fintech, sales, marketing and startups. I specialize in **Agentic AI, RAG systems, and AI platform architecture**, turning ambiguous business problems into reliable, scalable products used by thousands. Beyond shipping systems, I mentor **900+ aspiring engineers** and create practical AI content for **50k+ professionals**, focused on building AI that actually works in the real world.

EXPERIENCE

Saturn (YC24, Series A funded)

London, UK

Senior AI Engineer

Nov 2025 - Apr 2026

- **Shipped the flagship AI agent**, the product's second-largest feature, enabling financial advisors at a \$70M B2B SaaS to query internal client data and external sources in plain language using a **multi-agent LangGraph system** connected to web search via Exa, reducing time-to-insight from 2+ hours to under 2 minutes.
- **Built a full evaluation and observability layer** combining LLM-as-a-Judge scoring, golden datasets (500+ QA pairs), human-in-the-loop review, and Langfuse tracing across all agent runs, achieving ~95% answer accuracy on financial queries and reducing production debugging time by 20 h/week.
- **Delivered two core AI features within the first 4 weeks**, including a regulatory-aware RAG chat over the FCA Handbook using LangGraph, **MongoDB Atlas Vector Search**, and AWS Bedrock, enabling financial advisors to validate client actions against compliance guidelines directly inside the product.
- **Re-architected Saturn's AI stack** into a dedicated microservice, migrating legacy prompt-and-chain logic into a full agentic system with LangGraph orchestration, LiteLLM-based model routing (GPT, Claude, Gemini), persistent memory, and fallback strategies.

Take-two Interactive Software, Inc.

New York, NY

Data Scientist

Aug 2022 - Oct 2025

- Built an **Agentic AI RAG application** with Pinecone, Langgraph, and AWS Bedrock to run advanced data analytics and answer business questions in plain language, helping executives make faster decisions in weekly board meetings.
- Developed a RAG-based conversational system using **AWS Bedrock, LangChain, and local Ollama models**, answering 5,000+ event-related queries monthly.
- Built & deployed an **end-to-end ML pipeline** to classify catalog game brands and auto-allocate promotions, replacing 4 hours/day of manual review work; added CI/CD pipelines with GitHub Actions & Docker, deployed to AWS ECR/ECS.
- Architected and deployed a **Streamlit-based financial audit dashboard** that unified data from 5 different sources, and enabled auditors to finish reviews faster.
- Redesigned model store client, enabling version control of model metadata and implementing restrictions on direct **model registration into development**, enhancing model governance and improving collaboration between teams.
- Developed an application to **compare 1400 machine learning models** simultaneously and implemented batch registration of models, streamlining workflow efficiency. Reduced model deployment time by 80%.
- Implemented a robust **model validation pipeline**, allowing for the tracking and evaluation of model performances.

Data Science Intern

May 2022 - Aug 2022

- Collaborated closely with ML Engineers and Data Analysts to deploy price elasticity model outputs into production, resulting in real-time insights for the sales team and enhancing decision-making capabilities.
- Conducted comprehensive competitive analysis on data from 72 companies using **Snowflake, SQL, Tableau**, and **Python** providing valuable insights for identifying market trends, opportunities, and potential risks.

EDUCATION

Columbia University: Master of Science, Data Science

New York, NY, 2022

KCT: Bachelor of Engineering, Mechanical Engineering

India, 2021

SKILLS

- **Tools:** Python, SQL, AWS, MS Excel, Tableau, Snowflake, PySpark, Databricks, Streamlit, WordPress
- **Gen AI:** AI Agents, Langchain, LlamaIndex, AWS Bedrock, RAG applications, Pinecone
- **Libraries/Frameworks:** Pandas, Numpy, Matplotlib, Seaborn, Scikit-learn, Keras, Beautiful Soup, Git
- **Techniques:** Web Scraping, Time Series, Supervised and Unsupervised Machine Learning, Generative AI

ENTREPRENEURIAL EXPERIENCE

JotterWolf, Inc New York, NY
Co-founder & CTO Aug 2023 - Dec 2023

- Launched Jotterwolf, a productivity CRM tool and helped over 2000 job seekers; managed 4 interns.
- Made it to the **finals at Columbia Startup Challenge 2024**; featured at Columbia Entrepreneurship blogs.
- Designed and implemented a web scraping solution, increasing efficiency in tracking job applications and saved 2+ hours per day.
- Developed a **RAG-based application using AWS Bedrock and GPT-3.5**, improving interview success rates by 75%.
- Built a robust & scalable backend with **FastAPI**, and deployed on **AWS EC2**, handling over 50,000 monthly user interactions.

Shaker New York, NY
Founding Engineer Jan 2023 - Apr 2023

- Built & launched Shaker's core platform on Bubble, integrating with **Python & AWS** to power backend workflows, enabling the team to go from concept to live product in **under 3 weeks**.
- Developed a **user clustering ML algorithm** to match people for coffee chats based on shared interests, driving a 10x increase in successful matches and automating the manual match process to save 4h/day.

GoTTR New York, NY
Founding Engineer Jul 2021 - Dec 2021

- Regularized **data-scraping and data-modeling** for a massive 100 GB dataset, reducing manual work that previously took 4 hours to just a few seconds, resulting in significant time savings and improved productivity.
- Led a team of 5 in computerizing data management on **Google Cloud (GCP)** and implementing an Email-Alert system. This initiative resulted in monthly cost savings of \$7000 by improving operational efficiency.

DADDYODA Coimbatore, India
Co-founder Jul 2020 - Jul 2021

- Built Daddyoda, a blogging community platform for storytellers to express their thoughts globally.
- Automated the delivery of 50+ weekly promotional emails to a user base of 10,000+, utilizing Python. Increased operational efficiency by 30% and reduced manual effort by 20 hours per week.
- Implemented text analytics (NLP) to **predict customer sentiments** in reviews, reducing Customer Acquisition Cost (CAC) by 20% through improved targeting and personalized marketing strategies.

ACHIEVEMENTS

Speaker @ TedX Binghamton Sep 2025
Mentor @ MyRealProduct (Helped 700+ aspirants build end-to-end AI products) Jul 2024 - Present
Author @ Data & AI with Hari newsletter (Sharing weekly AI updates for the past 85 weeks) Jul 2024 - Present
Technical Judge @ ElevenLabs Hackathon Jul 2025
Industry Judge @ Globee Awards May 2025
Guest Speaker @ Google + AICamp Event Feb 2025
Guest Speaker @ BrowserStack Event Oct 2024

PROJECTS

Time Series Forecasting and Analysis of Onion Supply Chain (Research Study) Jan 2022
Published in the "Journal of Logistics, Supply Chain and Retail Management – Volume 5 Issue 1"
